Juandi Syahputro

Nickname : Juandi

Place, Date of Birth : Bogor, 15 Februari 2000

I'm a passionate software engineer with over four years of experience crafting digital products that make a meaningful impact. My journey started with a curiosity for how things work on the web, and it has evolved into a deep expertise in modern frontend and backend technologies. I specialize in React, Next.js, and TypeScript, building everything from sleek landing pages to complex enterprise applications. My approach combines expertise in software development, UI/UX design, and usability testing to deliver intuitive and visually appealing user experiences. Outside of coding, I actively research emerging technologies and share insights with the developer community.

Bogor Regency, West Java, Indonesia
